***Reason for Allowance***

The following is an examiner's statement of reasons for allowance:

The Applicant's invention, as stated in the original independent ***claims 8 and 29***, relates to a method and wireless communication system which includes a station having software capable generating and transmitting capability request. The system further utilizes the software that is configured to receive the capability request and to generate and transmit a capability request response that includes a status indicator comprising no more than eight data bits of a non-emergency-services position-determination (NESPd) capability, wherein the NESPd capability is user-selectable.

The closest prior art relevant to the claimed invention cited by the Examiner is Havinis et al. (U.S. Patent Number 6,311,069 B1).

Havinis teaches of a telecommunication system for notifying a mobile subscriber being positioned of the received positioning request and the identity of the requesting location application in order to enhance the privacy of the mobile subscriber. The mobile subscriber can either accept or reject the positioning request based on the location application identity displayed to the mobile subscriber.

Although Havinis et al. is considered to constitute to the state of the claimed invention; however, in contrast with comparable differences, the instant Application is considered novel over the prior art because as claimed in the original independent ***claims 8 and 29***, the Applicant specifically claims that the in addition to the transmitting and receiving of a status indicator, the Applicant further limits the claims whereby the status indicator comprises no more than eight data bits.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
